$\qquad$

## FACULTY OF AGRICULTURE

B.Tech. (Agriculture/Dairy Technology) Winter 2019-20 Examination

Semester:3
Subject Code: 20103203
Subject Name: Engineering Mathematics - III

Date: 27/11/2019
Time: $\mathbf{1 0 . 3 0}$ am To 12.30 pm
Total Marks: 50

## Instructions

1. All questions are compulsory.
2. Figures to the right indicate full marks.
3. Make suitable assumptions wherever necessary.
4. Start new question on new page.

## Q. 1

A) Fill in the blanks (Each of 0.5 Mark)

The relationship between $E$ and $\Delta$ is $\qquad$ .
i)
ii) Let $h$ be the finite difference, then forward difference operator is defined by $\qquad$ .
iii) The Newton's quadrature formula for $n=1$ represents $\qquad$ rule.
iv) The trapezoidal rule of integration for the two-segment is exact for integrating at most $\qquad$ order polynomials.
v) A Unit step function is defined as $\qquad$ .
vi) The Laplace transform of $\mathrm{L}\{\mathrm{t}\}$ is $\qquad$ .
vii) The null hypothesis contains a statement of $\qquad$ .
viii) For the $\qquad$ distribution, the observation closer to middle will occur with increasing frequency.
ix) Relation between mean, median and mode is $\qquad$ .
x) The value of correlation coefficient is between $\qquad$ and $\qquad$ .
B) Multiple Choice Questions (Each of 0.5 Mark)

Newton forward interpolation formula is used for $\qquad$ intervals.
i)

| a) | open | b) | Unequal |
| :--- | :--- | :--- | :--- |
| c) | equal | d) | Closed |

ii) $\Delta^{2}$ is called the ___order difference operator.

| a <br> J | first | b <br> J | Second |
| :--- | :--- | :--- | :--- |
| c) | third | d <br> J | Fourth |

iii)

The shifting operator is denoted by $\qquad$ .

| a) | $E$ | b) | $\omega$ |
| :--- | :--- | :--- | :--- |

| c) | $\nabla$ |
| :--- | :--- |

d)

iv) The value of $(1-\nabla)(1+\Delta)$ is $\qquad$

| a) | $\nabla+\Delta$ | b) | 1 |
| :--- | :--- | :--- | :--- |
| c) | $E$ | d) | Noneofthese |

v) The mean of $6,5,3,2,9$ is $\qquad$

| a) | 5 | b) | 4 |
| :--- | :--- | :--- | :--- |
| c) | 3 | d) | 2 |

vi) In Simpson's 3/8th rule, the number of intervals ( n ) should be multiple of $\qquad$ .

| a) | 3 | b) | 1 |
| :--- | :--- | :--- | :--- |
| c) | 2 | d) | None of these |

The Runge-Kutta method of second order is the $\qquad$ method.

| a) | Euler method | b) | modified Euler |
| :--- | :--- | :--- | :--- |
| c) | Taylor's method | d) | None of these |

viii) The Gaussian quadrature formula for three point is exact for polynomials up to $\qquad$ degree.

| a) | 1 | b) | 3 |
| :--- | :--- | :--- | :--- |
| c) | 5 | d) | 4 |

ix) Which of the following function does not have Laplace Transform?
x)

| a) | $g(t)=t^{2}$ | b) | $g(t)=e^{t^{2}}$ |
| :--- | :--- | :--- | :--- |
| c) | $g(t)=\frac{\sin t}{t}$ | d) | None of these |

$L^{-1}\left\{\frac{1}{s\left(s^{2}+1\right)}\right\}$ is $\qquad$ .

| a) | $1+\sin t$ | b) | $1-\sin t$ |
| :--- | :--- | :--- | :--- |
| c) | $1+\cos t$ | d) | $1-\cos t$ |

xi) $L\{\delta(t-a)\}$ is $\qquad$ .

| a) | $e^{-a s}$ | b) | $e^{a s}$ |
| :--- | :--- | :--- | :--- |
| c) | $e^{-a s^{2}}$ | d) | None of these |

$\qquad$

| a) | $\frac{1}{s}$ | b) | $\frac{1}{s^{2}}$ |
| :--- | :--- | :--- | :--- |
| c) | $-\frac{(-1)^{2}}{s}$ | d) | None of these |

xiii) A statement about population developed for the purpose of testing is called $\qquad$ .

| a) | Hypothesis | b) | Hypothesis testing |
| :--- | :--- | :--- | :--- |
| c) | Level of significance | d) | Test- statistic |

xiv) Any statement whose validity is tested on the basis of a sample is called
$\qquad$

| a) | Null hypothesis | b) | Alternative hypothesis |
| :--- | :--- | :--- | :--- |
| c) | Statistical hypothesis | d) | simple hypothesis |

xv) A hypothesis may be classified as $\qquad$ .

| a) | Simple | b) | Composite |
| :--- | :--- | :--- | :--- |
| c) | Null | d) | All of the above |

xvi) The alternative hypothesis is also called $\qquad$ .

| a) | Null hypothesis | b) | Research hypothesis |
| :--- | :--- | :--- | :--- |
| c) | Statistical hypothesis | d) | simple hypothesis |

The equation of regression lines $y=0.5 x+a$ and $x=0.4 y+b$. The correlation coefficient is $\qquad$ .

| a) | $\sqrt{0.2}$ | b) | 0.45 |
| :--- | :--- | :--- | :--- |
| c) | $-\sqrt{0.2}$ | d) | None of these |

xviii) The median of the numbers $11,10,12,13$ and 9 is $\qquad$ .

| a) | 12.5 | b) | 12 |
| :--- | :--- | :--- | :--- |
| c) | 10.5 | d) | 11 |

xix) The correlation coefficient $r$ is independent of change of $\qquad$ .

| a) | Origin and Scale | b) | Origin |
| :--- | :--- | :--- | :--- |
| c) | Scale | d) | None of the above |

xx) If $r=0$, the two variables are $\qquad$ .

| a) | Linearly independent | b) | Linearly dependent |
| :--- | :--- | :--- | :--- |

|  |  |  |  |
| :--- | :--- | :--- | :--- |
| c) | Positive correlation | d) | Negative correlation |

Q. 2
A) Define the following (Any five out of seven questions)
(1) Write the Newton's Forward interpolation formula.
(2) Write the Newton's divided difference formula.
(3) Write the formula of the Taylor series and modified Taylor series.
(4) What is the Laplace transform of cosh at?
(5) State first shifting theorems for the Laplace transform.
(6) Define test of significance.
(7) The angle between two regression lines is given by $\qquad$ _.
B) Answer the following (Any five out of seven questions)
(1) Write the Newton's Backward interpolation formula.
(2) Prove the $E=1+\Delta$.
(3) State Euler and modified Euler formula.
(4) Find $L^{-1}\left\{\frac{1}{s+7}\right\}$.
(5) Find $L\left(t^{2}+\sin 2 t-2 e^{-t}\right)$
(6) Write the formula for spearmans correlation.
(7) Define Karl Pearson's correlation coefficient.
Q. 3 Write Short notes(Any five out of six questions)
(1) Construct the table using Newton's divided difference formula for the following data:

| $x:$ | 1 | 2 | 4 | 10 |
| :--- | :--- | :--- | :--- | :--- |
| $f(x):$ | 10 | 15 | 67 | 430 |

(2) Find the value of $y$ for $x=0.1$ by Picard's method, given that $\frac{d y}{d x}=\frac{y-x}{y+x}$, $y(0)=1$.
(3) Apply Runge's method to find an approximate value of $y$ when $x=0.2$, given that $\frac{d y}{d x}=x+y$ and $y=1$ when $x=0$.
(4) Find the value of $1 * t$.
(5) What are degrees of freedom of $\bar{x}, s^{2}$ and correlation coefficient?
(6) Find the equation of regression lines from the following data and also estimate y for $\mathrm{x}=1$.

| $x$ | 3 | 2 | -1 | 6 | 4 | -2 | 5 | 7 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $y$ | 5 | 13 | 12 | -1 | 2 | 20 | 0 | -3 |

Q. 4 Long Questions (Any three out of four questions)
(1) Find $f(14)$ using Gauss backward formula:

| $x$ | 0 | 5 | 10 | 15 | 20 | 25 |
| :---: | :--- | :--- | :--- | :--- | :--- | :--- |
| $y=f(x)$ | 7 | 11 | 14 | 18 | 24 | 32 |

(2)

Evaluate f(9), using Newton's divided difference formula for the given values

| $x:$ | 5 | 7 | 11 | 13 | 17 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $f(x):$ | 150 | 392 | 1452 | 2366 | 5202 |

(3)

Evaluate $\int_{0}^{6} \frac{d x}{1+x^{2}}$ by using (i) Trapezoidal rule, (ii) Simpson's $1 / 3$ rule,
(iii) Gauss Formula for $n=2$ and $n=3$.
(4) Using Laplace transformation solve the initial value problem

$$
y^{\prime \prime}+2 y^{\prime}+5 y=e^{-t} \sin t, \quad y(0)=0, y^{\prime}(0)=1
$$
